FINLAND**

MIGHT
Malaysian Industry-Government Group
for High Technology

KONE

AEE
Aalto University
Executive Education

NOKIA

Developing smart and resource-efficient solutions is a global challenge, but also one that Finnish society has special experience and expertise in resolving. The limited population and harsh weather conditions of have forced Finns to be innovative for generations, and those innovations have laid the groundwork for groundbreaking advances in making human living environments smarter and more sustainable.

These solutions by Finnish companies highlight advanced concepts for city planning, sustainable and smart living, energy efficiency, and smart mobility services integrated with modern ICT technologies. The sustainable built environment also includes advanced waste management, lighting and recycling.

A smart city uses digital solutions to improve performance, livability and well-being of its citizens. New technology and data is used for solving the cities' economic, social and environmental challenges, also improving governance. Finnish towns and cities are global leaders in these achievements.

Please come and join the Embassy of Finland, Business Finland and MIGHT to discuss the future of Smart Cities and hear more about Finnish solutions for bringing that future about.
